The child's early childhood education plan is made together with the child, guardian and early childhood education educator. Goals set for the pedagogic activities in early childhood education are registered in the plan.

- The viewpoint of including the child and family is essential in early childhood education at the City of Kerava.
- The child's assessment / discussion form regarding daily life in early childhood education supports the making of the early childhood education plan. A teacher / day care worker at early childhood education completes the assessment together with the child. The assessment helps the child explain what they like or don't like about the daily life of early childhood education.
- Feedback from the child's assessment is utilised when making the child's early childhood education plan, in particular section 2.3.
- An early childhood education teacher or day care worker can complete the assessment with the child.
- The child's assessment is attached to the child's early childhood education plan and stored on the City of Kerava's network drive in the day care centre group's own folder. In a private day care centre, the child's early childhood education plan and attachments are stored in a data secure place according to the private day care centre's storage practices, electronically if possible.
- The child's early childhood education plan is archived according to the archival instructions (group letter 40/2019) for documents created in early childhood education at the City of Kerava. If necessary when, for example, a child moves to a different municipality, data is transferred according to the City of Kerava's data transfer practices for early childhood education (group letter 15/2019). The guardian's consent is not needed when transferring data internally within the City of Kerava. It's allowed to transfer data internally within the organisation of the City of Kerava without a separate data transfer permission within the framework of the legislation (group letter 15/2019). In a private day care centre, the child's early childhood education plan is archived according to the day care centre's archival practices.
